Spain and Portugal

IBERIAN FUEL RETAIL

Market dynamics, competitive landscape and investor considerations

Spain and Portugal

Historical evidence and an editable 2026–2030 analyst forecast

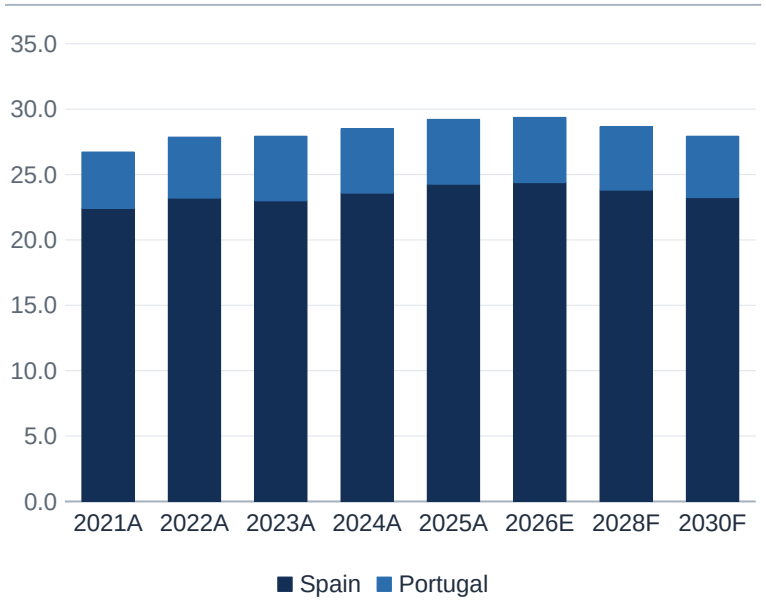

3 November 2026

Prepared for potential investors

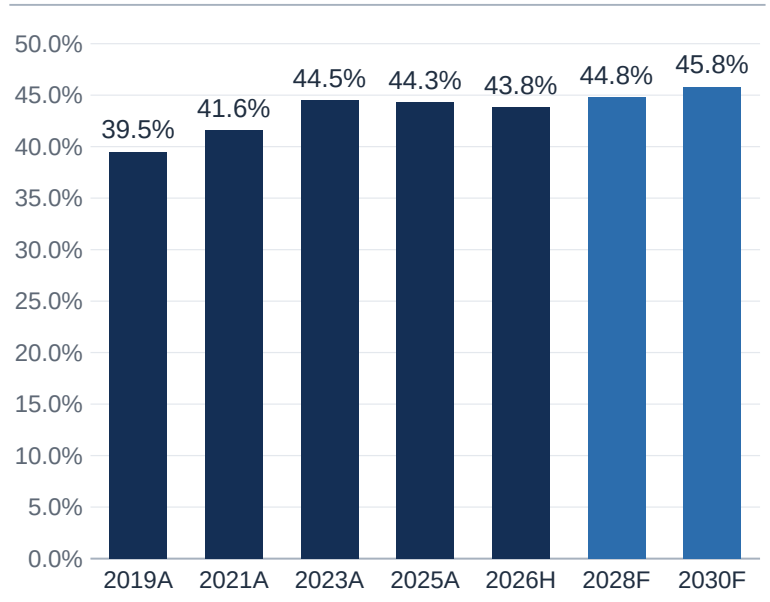

Iberian fuel retail investment overview

Liquid fuels remain material while network fragmentation and convenience create distinct investment opportunities

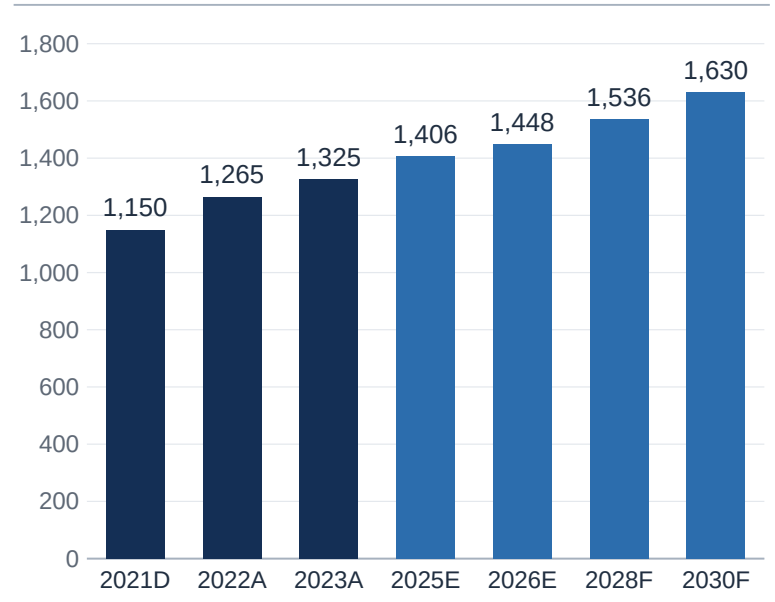

Iberian forecourt fuel volumes (Mt)

Spain independent site share (%)

Spain forecourt-shop sales (€m)

Demand requires country-specific underwriting

Forecourt volumes recovered after the pandemic. The forecast explicitly models parc, mileage, BEV stock and efficiency, with a separate commercial-vehicle component.

Ownership and affiliation are different

Large branded networks include dealer-operated sites. Independent station counts include chains and a long tail. Acquisition and reclassification can change reported shares.

Non-fuel execution matters

Shop sales, foodservice, loyalty and charging create additional uses of each location. The market outlook assumes 3% nominal shop growth, while company targets have separate labels.

Metric / series	Historical period	Annual change	Forecast period	Annual change
Spain Volume (CAGR)	2021A–2025A	2.0%	2025A–2030F	-0.9%
Spain Ind share (pp p.a.)	2019A–2025A	0.8	2026H–2030F	0.44
Spain Cstore (CAGR)	2021D–2023A	7.3%	2023A–2030F	3.0%

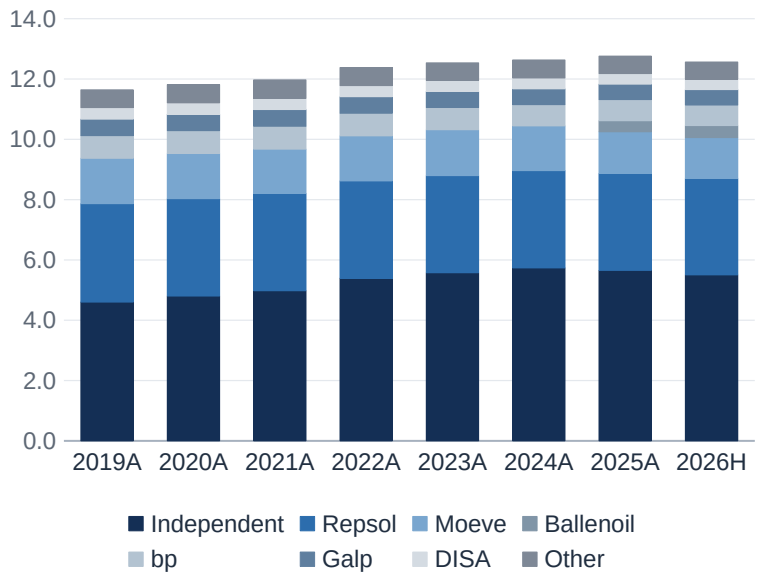

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Sources: DBK / INFORMA (DBK26), CNMC (CNMC26), DBK / INFORMA (CS). Input-level URLs, pages, formulas and assumptions in Excel.

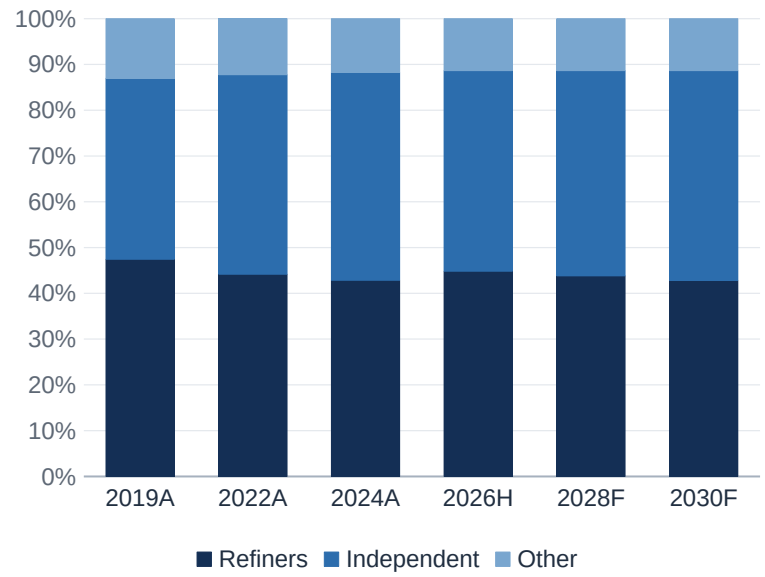

Evolving Spanish forecourt operator landscape

The independent category expanded over time, while Ballenoil's reclassification and the 2026 census revision alter recent shares

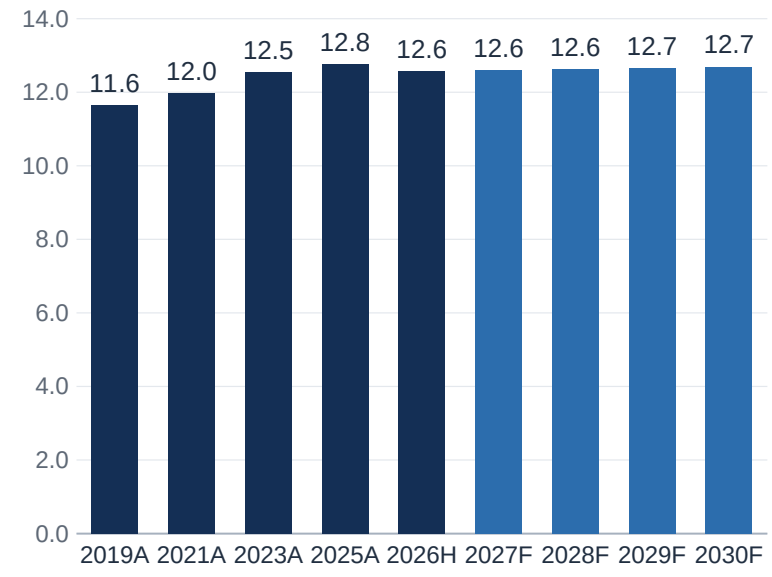

Station count by affiliation (000s)

Affiliation mix (%)

Total sites, historic and model (000s)

Expansion is concentrated in low-cost formats

Independents rose from 4,599 sites in 2019 to 5,505 at June 2026. Ballenoil sits inside the independent category before 2025 and under Moeve afterwards.

Census changes require care

The 195-site decline from December 2025 to June 2026 largely reflects registry updates. The forecast starts from June 2026, assumes 0.25% annual site growth and +0.5pp annual independent share from 2027.

Metric / series	Historical period	Annual change	Forecast period	Annual change
Spain Oil share (pp p.a.)	2019A–2024A	-0.92	2026H–2030F	-0.44
Spain Total (CAGR)	2019A–2025A	1.5%	2026H–2030F	0.2%

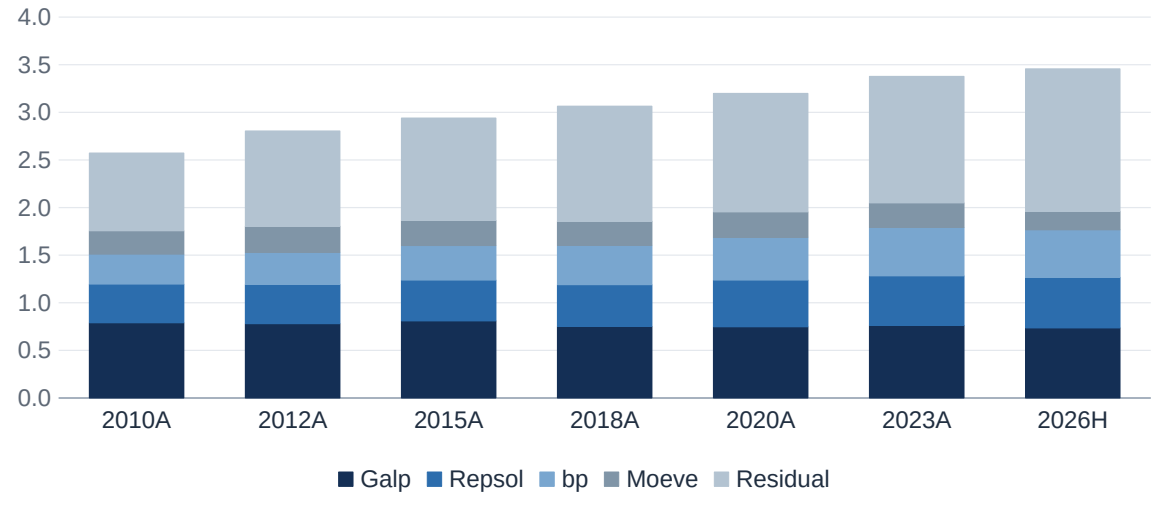

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Sources: CNMC (CNMC26). Input-level URLs, pages, formulas and assumptions in Excel.

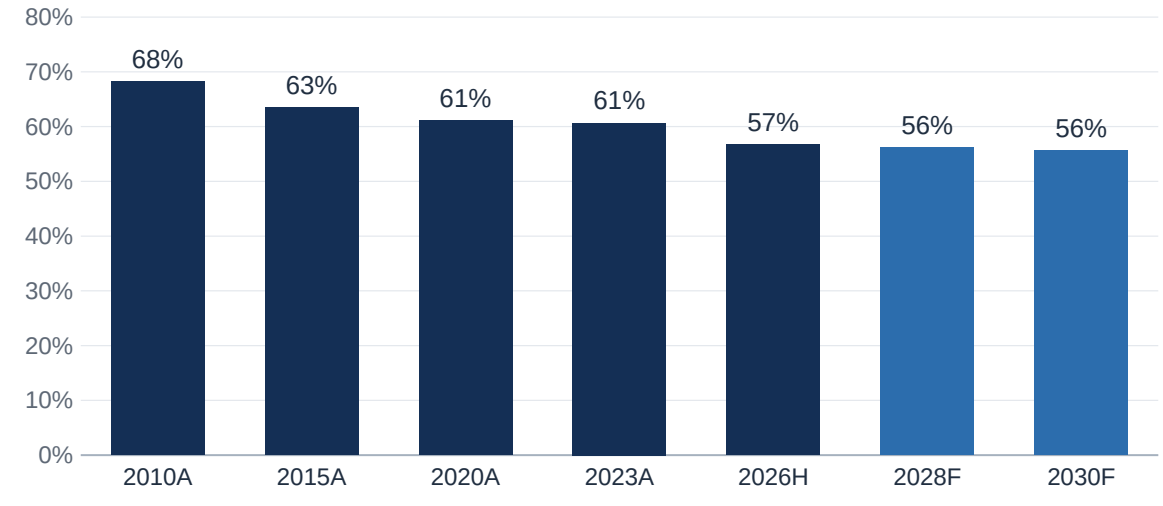

Portuguese forecourt operator landscape

The four large brands remain prominent, but smaller networks and alternative formats have expanded

Portugal public stations by brand (000s)

Four leading brands' share (%)

Brand	2010A	2026H	2030F
Galp	789	735	735
Repsol	407	531	531
bp	314	500	500
Moeve	246	194	194
Residual	817	1,497	1,567

Different country dynamics

Galp remains the largest network in the selected census. Repsol and bp grew across the historical period, while Moeve's branded estate contracted.

Forecast and source reconciliation

The model holds the four large-brand counts flat and assumes 0.5% annual total-site growth from 2027. The residual captures additions. ERSE's minor-brand figures differ across sections, so only Figure 3-11 is used.

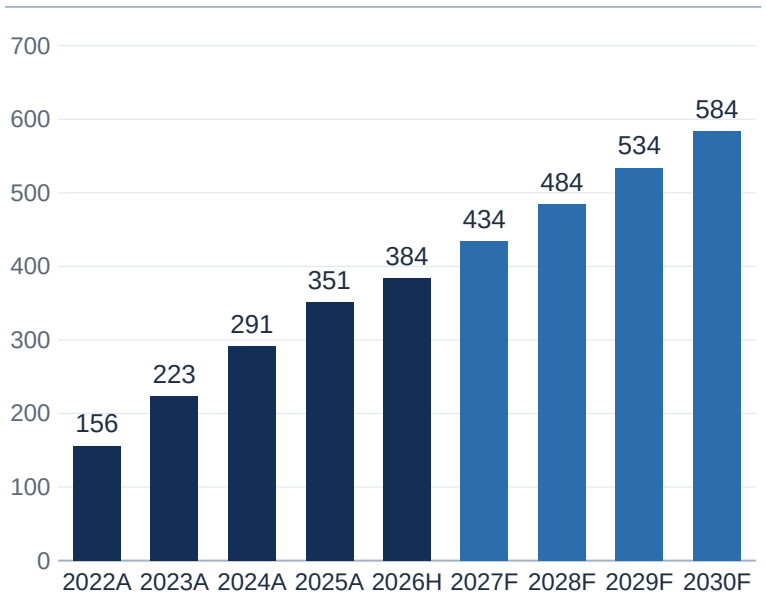

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Sources: ERSE (ERSE). Input-level URLs, pages, formulas and assumptions in Excel.

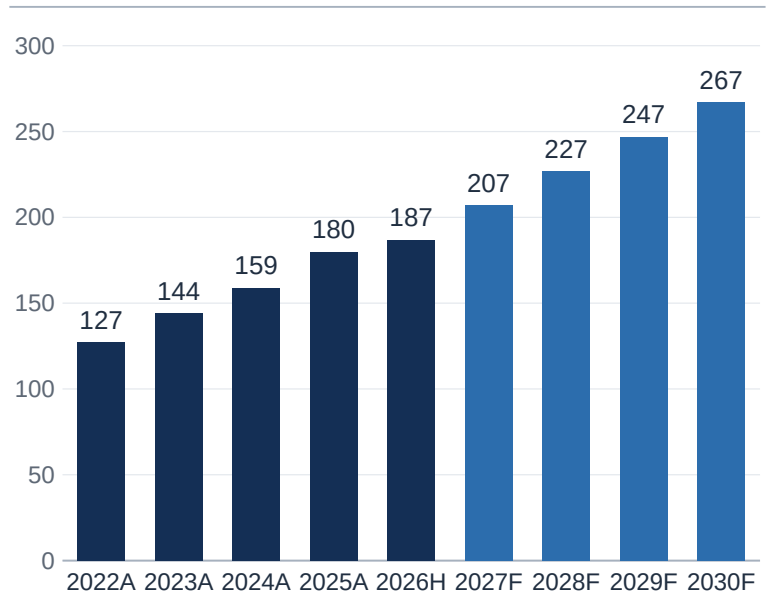

Independent chains are building scale within a fragmented market

Organic rollout and institutional ownership coexist with a large population of stations without recurring brands

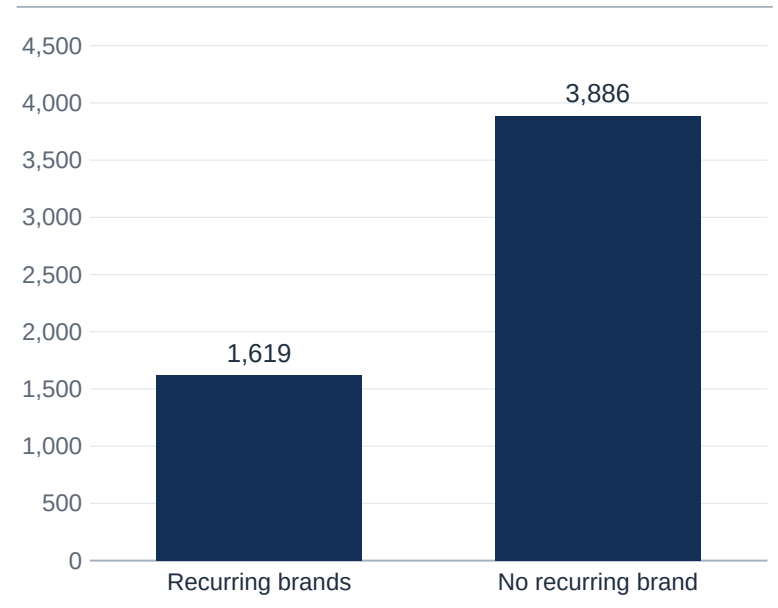

Plenergy network (sites)

Petroprix network (sites)

Independent network split, June 2026

Platform ownership

Portobello and Tensile invested in Plenergy in 2024. Petroprix is a founder-led operator. Moeve controls Ballenoil, which therefore leaves the regulator’s independent category.

Forecast is an opening-rate scenario

Plenergy adds 50 sites annually and Petroprix adds 20 from the H1 2026 base. No announced acquisition is counted as completed or embedded in these forecasts.

Metric / series	Historical period	Annual change	Forecast period	Annual change
Plenergy (CAGR)	2022A–2025A	31.0%	2026H–2030F	9.8%
Petroprix (CAGR)	2022A–2025A	12.3%	2026H–2030F	8.2%

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Sources: CNMC (CNMC26), Portobello Capital (PORTO), Cinco Días (PETRO), Moeve (MOE). Input-level URLs, pages, formulas and assumptions in Excel.

Major operators and business models

Brand, property ownership, fuel supply and operation define different economic exposures

Operator / format	Ownership	Positioning and operating exposure
Repsol	Listed	Full-service multi-energy platform. Branded network includes dealer and company-operated locations.
Moeve / Ballenoil	Mubadala / Carlyle controlled	Moeve offers service and convenience. Ballenoil retains a distinct low-cost proposition within the group.
Galp	Listed, strategic shareholders	Mobility and convenience within a wider Commercial segment covering oil, gas, power and enterprise clients.
bp	Listed	Branded forecourts, fuel cards and convenience partnerships, including the Spanish Dia pilot.
DISA / Shell and PRIO	Private groups	DISA operates branded retail and distribution. PRIO participates in fuel marketing and production in Portugal.
Plenergy / Petroprix	Private capital / founder-led	Automated low-cost proposition. Public pure-retail financial disclosure remains limited.
Dealer / long tail	Local owners and operators	Site freehold or lease, supply exclusivity and operator contracts must be mapped individually.

CODO, DODO and commission structures

Company ownership does not necessarily imply company operation. Branded station shares cannot establish the investable freehold estate or operator EBITDA.

Investment diligence

Obtain site-level contract type, expiry, supply terms, fuel pricing control, shop economics, capex responsibilities and property rights before valuing a network.

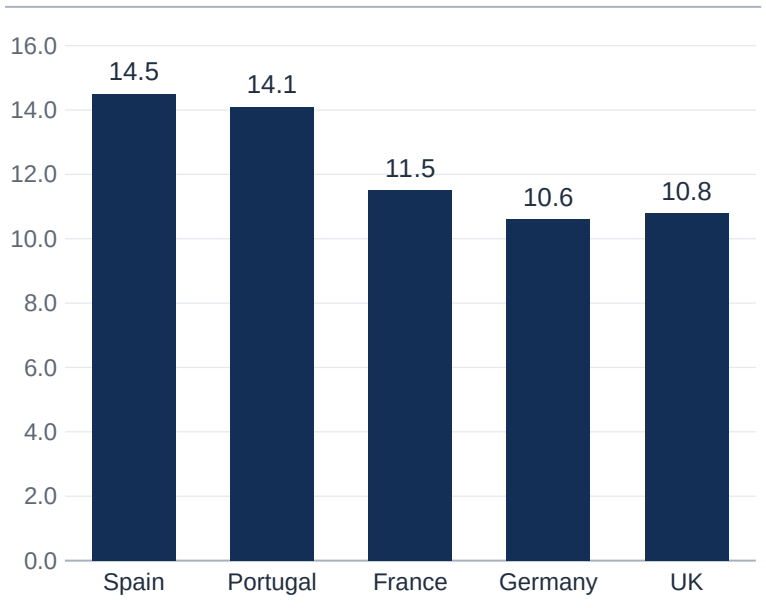

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Sources: Repsol (RSH), Galp (GSH), Moeve (MOE), Dia (DIA), Autoridade da Concorrência (ADC), CNMC (CNMC26), ERSE (ERSE), Portobello Capital (PORTO), Cinco Días (PETRO). Input-level URLs, pages, formulas and assumptions in Excel.

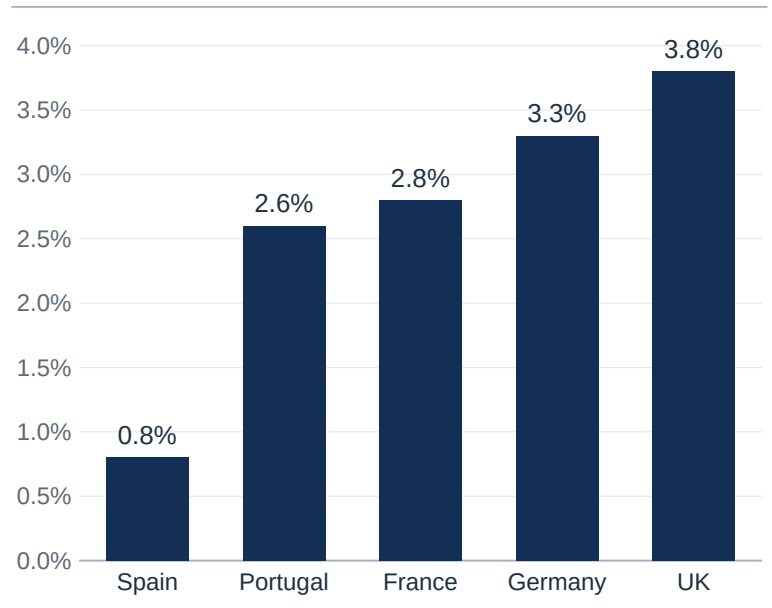

Iberian mobility remains dependent on an ageing liquid-fuel fleet

Cross-country context highlights the importance of fleet turnover and local site productivity

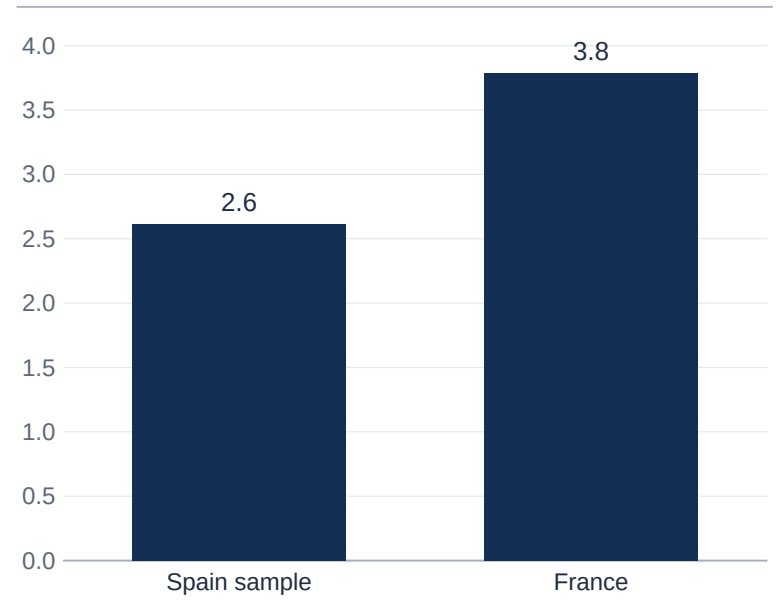

Passenger-car fleet age, 2024 (years)

BEV share of car stock, 2024 (%)

Reported 2025 throughput (m litres/site)

Stock changes more slowly than new registrations

A low BEV stock share and old fleet support a continuing liquid-fuel requirement. They also make forecasts sensitive to replacement rates and incentives.

Site size requires separate evidence

Spain’s reporting sample sold 29.7bn litres across 11,370 stations. Cross-country throughput definitions differ. No verified comparable land-area or shop-area series was available, so throughput is labelled as productivity, not physical size.

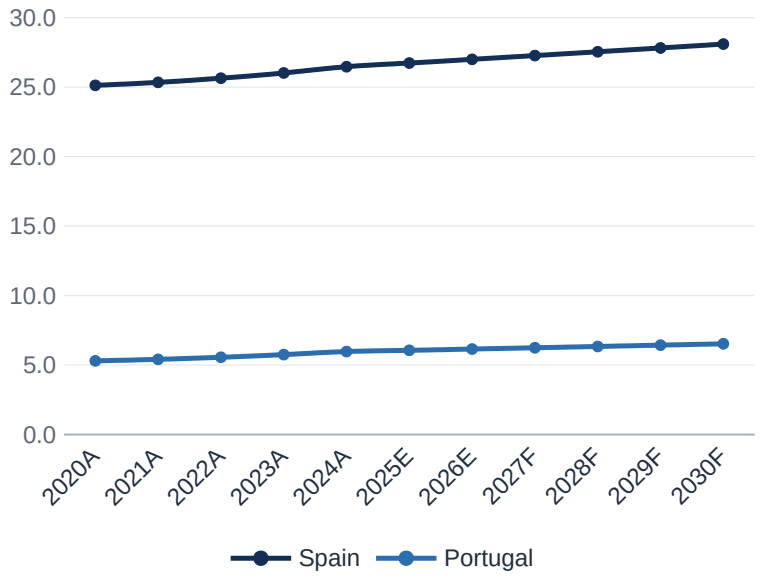

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Sources: ACEA (ACEA), CNMC (CNMC26), French Ministry of Ecological Transition (FR). Input-level URLs, pages, formulas and assumptions in Excel.

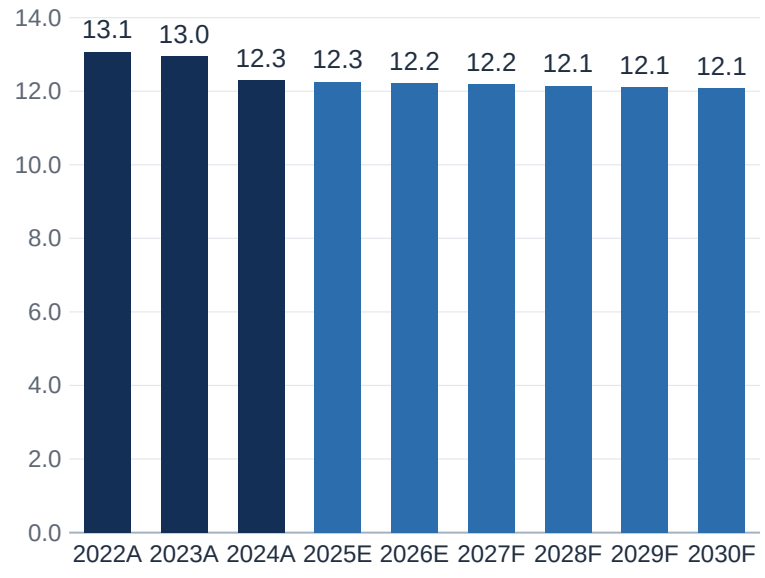

Car parc, mileage and total distance travelled

Growing vehicle ownership can offset softer utilisation, but the 2024 mileage methodology limits historical comparisons

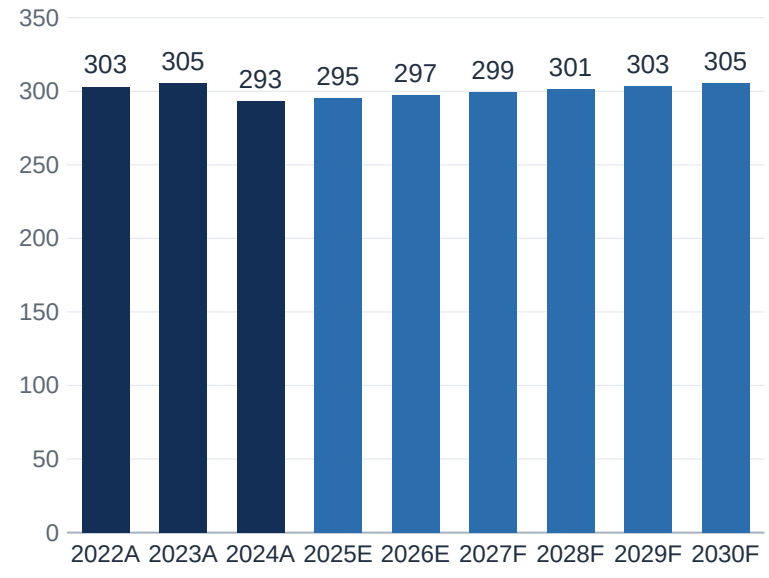

Registered passenger cars (m)

Spain annual km per circulating car (000s)

Spain circulating-car distance (bn km)

Car parc assumption

Spain grows 1.0% annually and Portugal 1.5% from the 2024 registered fleet. The forecast sits below the recent actual growth of both countries.

Mileage assumption

DGT reports 13,073km in 2022, 12,950km in 2023 and 12,295km in 2024. Its revised methodology prevents a clean like-for-like decline estimate. The model assumes a modest 0.3% annual fall from 2025.

Consistent distance build

Total distance starts from DGT's circulating-fleet estimate and applies parc and mileage growth. It does not multiply DGT mileage by the larger ACEA registered fleet.

Metric / series	Historical period	Annual change	Forecast period	Annual change
Spain Cars (CAGR)	2020A–2024A	1.3%	2024A–2030F	1.0%
Spain Km (CAGR)	2022A–2024A	n.a. (method)	2024A–2030F	-0.3%
Spain Distance (CAGR)	2022A–2024A	n.a. (method)	2024A–2030F	0.7%

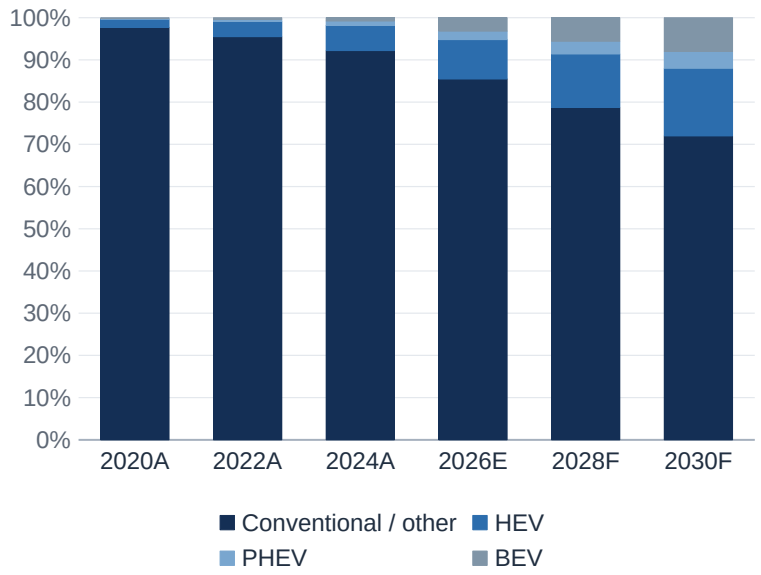

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Sources: ACEA (ACEA), DGT (DGTNEW). Input-level URLs, pages, formulas and assumptions in Excel.

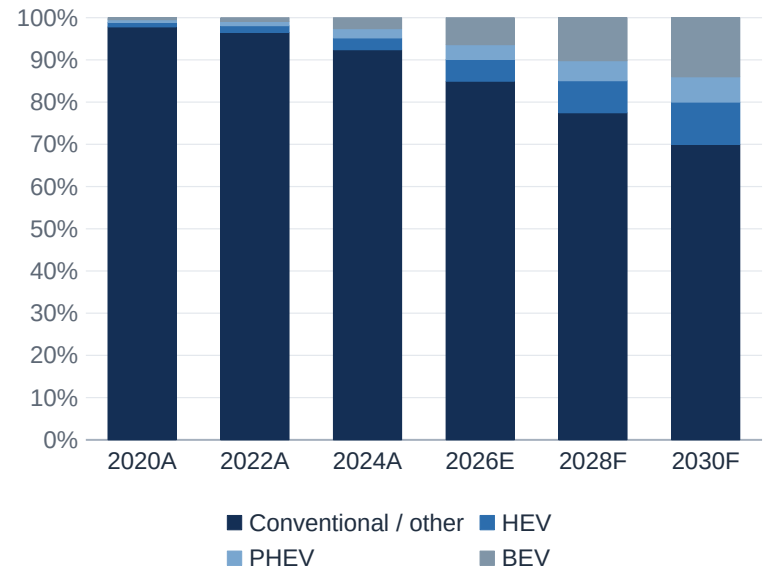

Electrification of the fleet will gradually reduce liquid-fuel exposure

The model forecasts BEV shares of 8% in Spain and 14% in Portugal by 2030, distinct from official all-vehicle policy targets

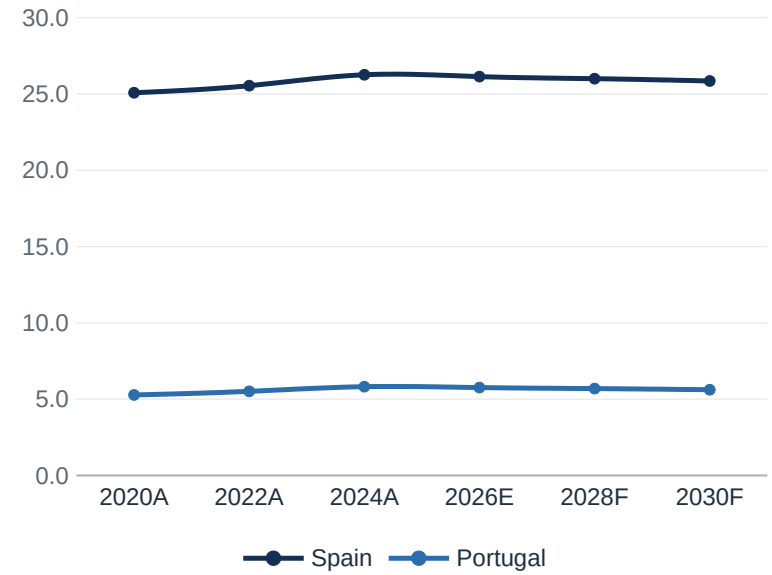

Spain passenger-car powertrain mix (%)

Portugal passenger-car powertrain mix (%)

Cars with liquid-fuel capability (m)

Modelled stock trajectories

BEV, PHEV and HEV shares follow editable linear paths from 2024. The model includes PHEVs and HEVs within liquid-fuel-capable cars. Remaining conventional and other fuels form the residual.

Policy target has a different perimeter

Spain's PNIEC targets 5.5m electric vehicles of all categories by 2030. This is a policy ambition, not a forecast for the passenger-car BEV stock. Infrastructure, affordability and replacement rates affect delivery.

Metric / series	Historical period	Annual change	Forecast period	Annual change
Spain OtherICE (pp p.a.)	2020A–2024A	-1.38	2024A–2030F	-3.37
Portugal OtherICE (pp p.a.)	2020A–2024A	-1.35	2024A–2030F	-3.73
Spain LiquidCars (CAGR)	2020A–2024A	1.2%	2024A–2030F	-0.3%

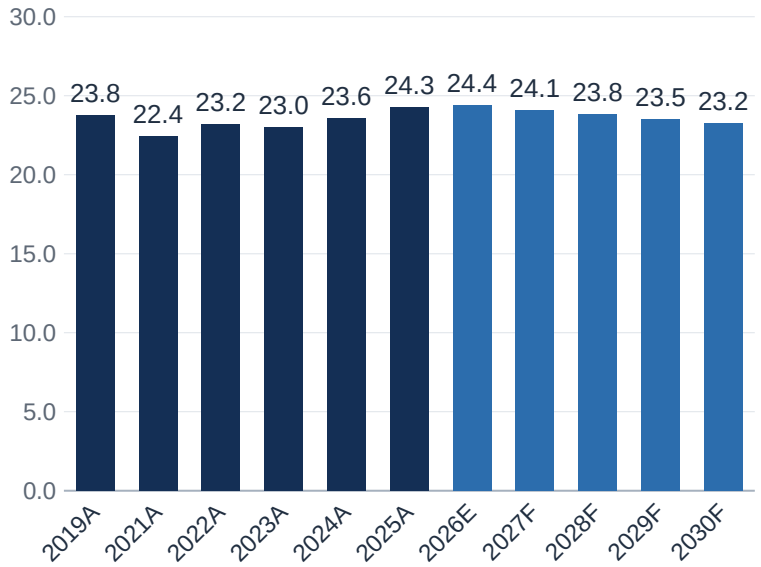

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Sources: ACEA (ACEA20), ACEA (ACEA22), ACEA (ACEA), MITECO (PNIEC). Input-level URLs, pages, formulas and assumptions in Excel.

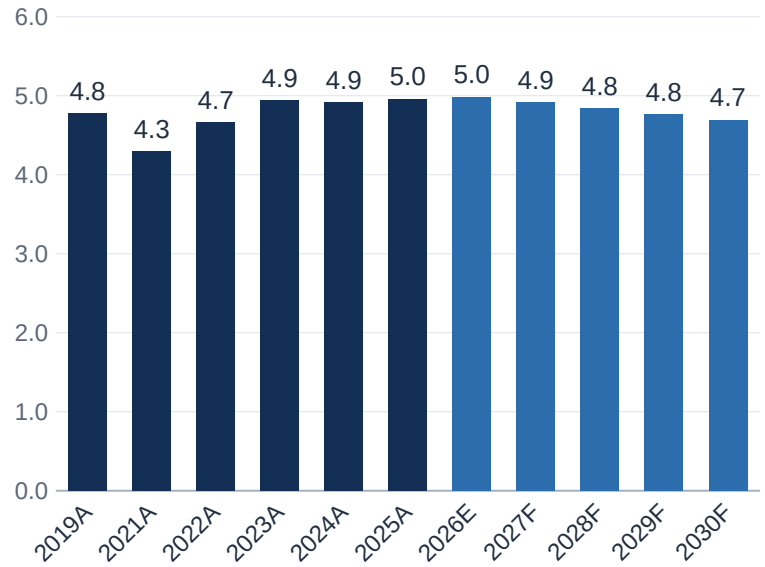

Historical recovery gives way to a more demanding fuel-volume outlook

Forecourt demand is forecast by country, with different passenger and commercial-vehicle drivers

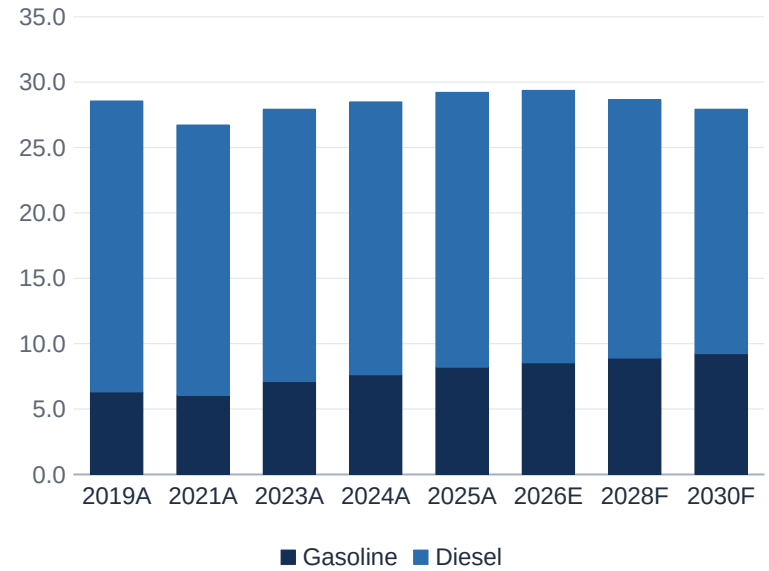

Spain forecourt fuel sales (Mt)

Portugal forecourt fuel sales (Mt)

Iberian forecourt product mix (Mt)

Historical basis

DBK’s forecourt volumes differ from all road-fuel deliveries. Product values are rounded and may not sum exactly to synthesis totals. 2020 is omitted because no exact matched figure was verified.

Forecast construction

2026 volumes grow 0.5%. From 2027, passenger demand reflects parc, mileage, BEV stock and 1% annual efficiency gains. Commercial demand declines 0.5%. Passenger shares are assumed at 65% in Spain and 70% in Portugal.

Gasoline / diesel mix

The scenario adds 1pp annually to gasoline’s share of tonnes. Diesel is the residual. The forecast is an analyst model and does not extrapolate a company volume target.

Metric / series	Historical period	Annual change	Forecast period	Annual change
Spain Volume (CAGR)	2019A–2025A	0.3%	2025A–2030F	-0.9%
Portugal Volume (CAGR)	2019A–2025A	0.6%	2025A–2030F	-1.1%
Iberia Gasoline (CAGR)	2019A–2025A	4.5%	2025A–2030F	2.4%

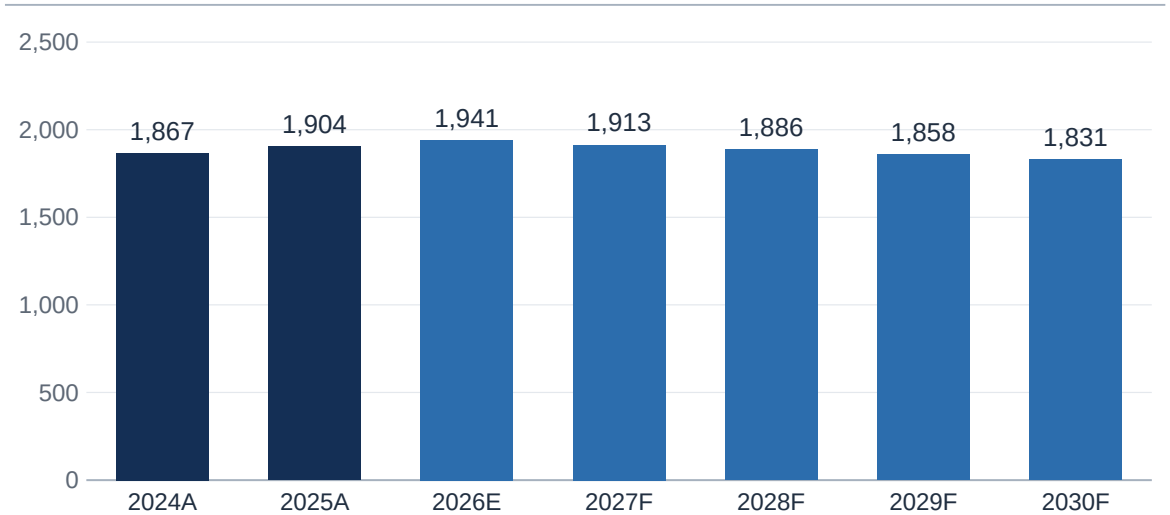

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Sources: DBK (DBK2020), DBK (DBK2022), DBK (DBK2023), DBK (DBK2024), DBK / INFORMA (DBK25), DBK / INFORMA (DBK26). Input-level URLs, pages, formulas and assumptions in Excel.

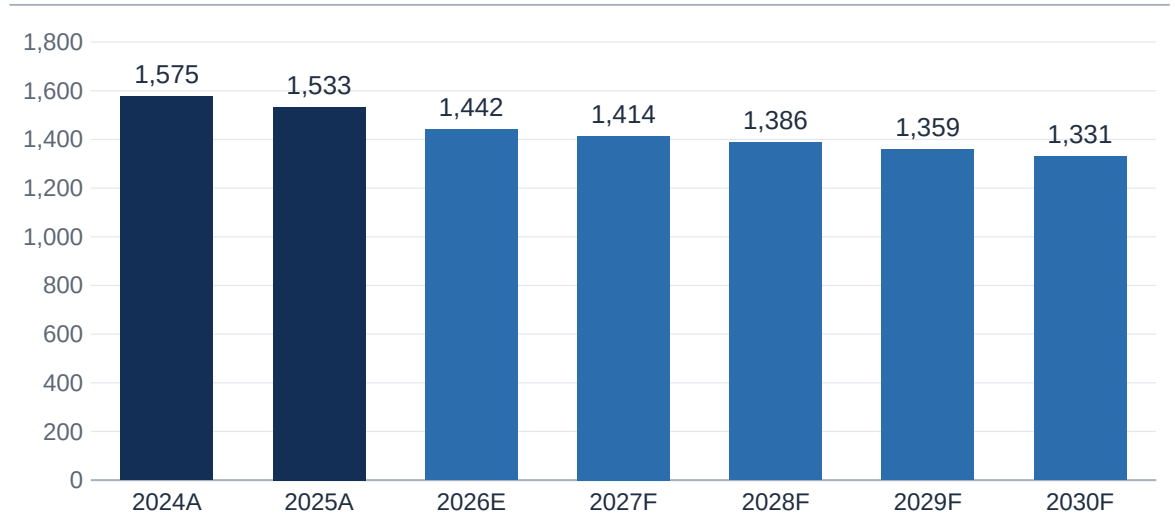

Network expansion and lower fuel demand can dilute site productivity

Forecast average throughput depends on both market volumes and the future station count

Spain fuel sold per station (tonnes)

Portugal fuel sold per station (tonnes)

Metric	2025A	2030F
Spain volume (Mt)	24.3	23.2
Spain stations	12,743	12,688
Portugal volume (Mt)	4.96	4.69
Portugal stations	3,235	3,527

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Perimeter break is visible

2024–2025 productivity pairs DBK fuel volumes with its own site count. The forecast uses the current CNMC / ERSE station census. This creates a denominator break and prevents a clean 2025–2026 productivity comparison.

Physical footprint is a separate diligence item

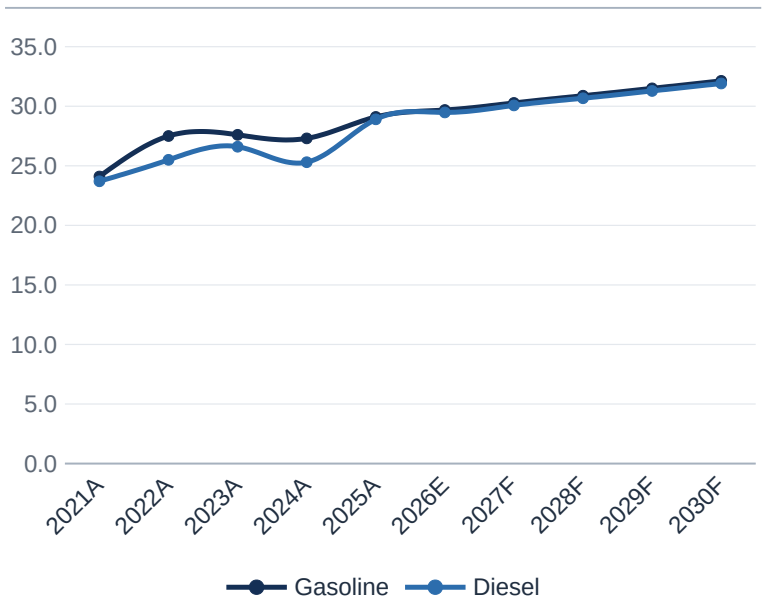

The size of the shop, parking area, land parcel, wash operation and charging capacity affects the non-fuel opportunity. The public evidence does not provide a consistent historical or forecast physical-area dataset.

Sources: DBK / INFORMA (DBK25), DBK / INFORMA (DBK26), CNMC (CNMC26), ERSE (ERSE). Input-level URLs, pages, formulas and assumptions in Excel.

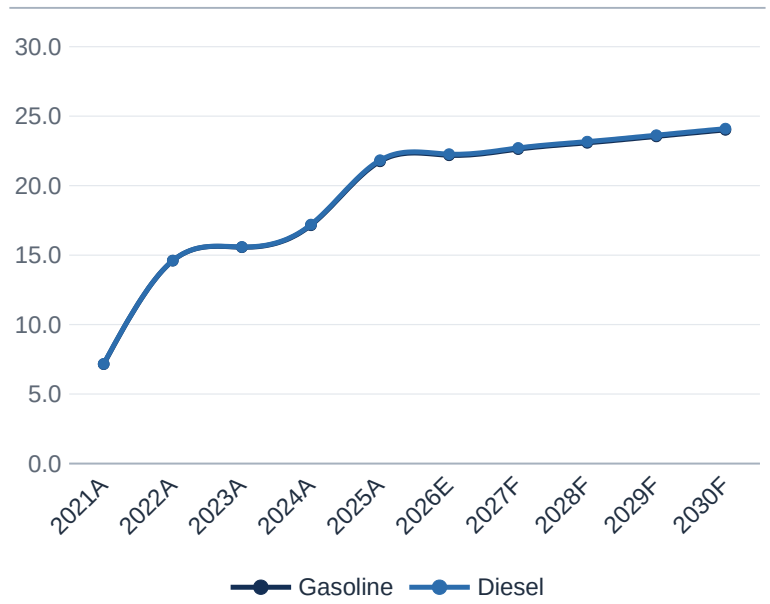

Spanish gross fuel spreads increased alongside regulatory costs

Distribution spreads include compliance, logistics and station operating costs before retailer profit

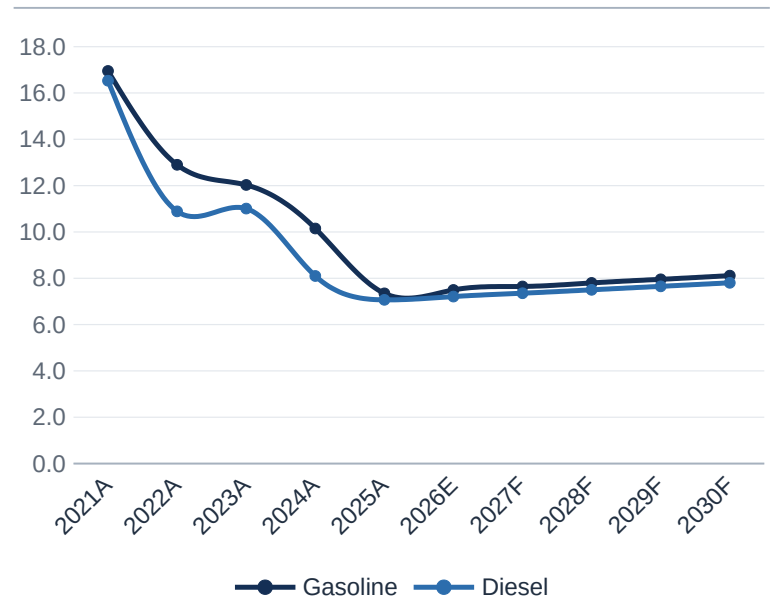

Gross distribution spread (c€/litre)

Estimated regulatory obligations (c€/litre)

Spread less obligations (c€/litre)

Consistent historical definitions

CNMC measures PAI–Ci: pre-tax retail selling price less an international product benchmark. Its regulatory-cost estimates are a separate schedule. The difference is an indicative residual, not a reported retail margin.

Costs remaining before retailer profit

Station staffing, payment fees, logistics, losses, rent and central costs still need deduction. Country methodologies also differ. The model grows both gross spreads and regulatory obligations by 2% annually after 2025.

Portugal cross-check

ERSE discloses H1 2026 intervals of 10 to <15 c€/litre for simple diesel and 15 to <20 c€/litre for gasoline 95. These include secondary distribution, station costs and commercial margin.

Metric / series	Historical period	Annual change	Forecast period	Annual change
Spain GrossG (CAGR)	2021A–2025A	4.8%	2025A–2030F	2.0%
Spain CostG (CAGR)	2021A–2025A	32.1%	2025A–2030F	2.0%
Spain ResidualG (CAGR)	2021A–2025A	-18.9%	2025A–2030F	2.0%

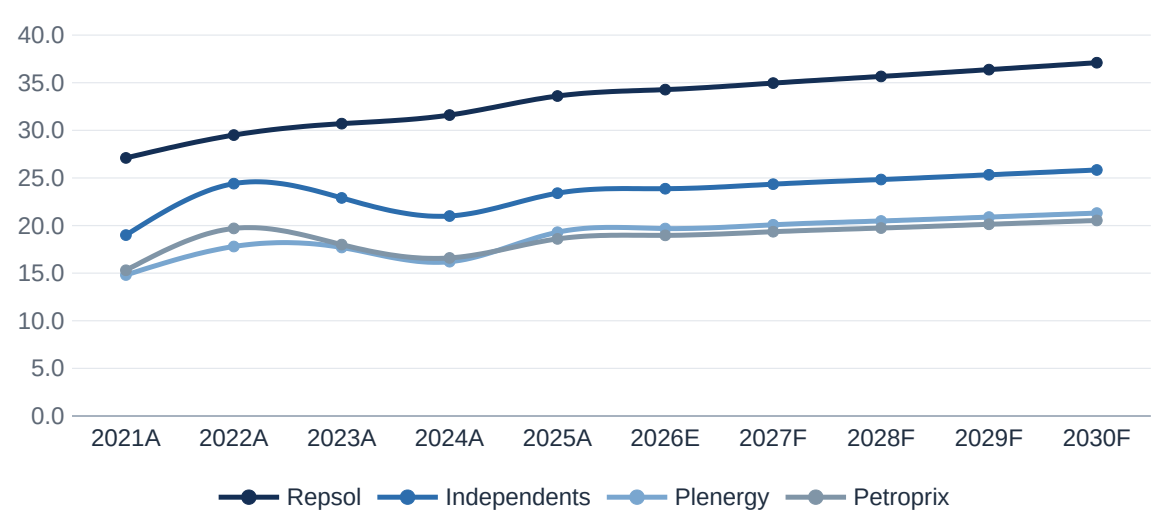

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Sources: CNMC (CNMCS), ERSE (ERSE). Input-level URLs, pages, formulas and assumptions in Excel.

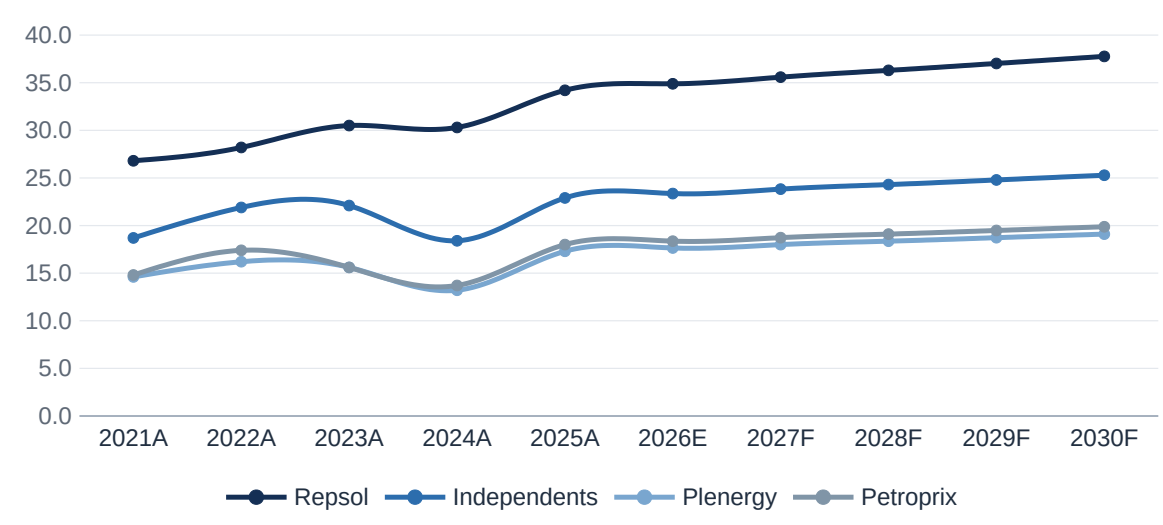

Low-cost operators sustain materially lower published fuel spreads

Historical operator data support format differentiation, while future spreads remain an explicit scenario

Gasoline gross distribution spread (c€/litre)

Diesel gross distribution spread (c€/litre)

2025 spread, c€/l	Gasoline	Diesel
Moeve	34.6	35.1
bp	34.3	34.2
Repsol	33.6	34.2
Galp	29.7	29.8
Ballenoil	19.6	18.7
Plenergy	19.3	17.3
Petroprix	18.6	18

Operating format affects the cost base

Automated payment, limited staffing and a narrower non-fuel proposition can support lower pump prices. Published spreads alone cannot establish which format generates more station EBITDA.

Price competition and compliance risk

Low-cost entry can constrain local prices. Obligations, procurement terms, inventory timing and supplier pass-through affect the margin available to each operator.

Forecast treatment

Every shown operator spread grows 2% annually from 2025. This holds relative positioning broadly constant and is an editable assumption, not a regulator or broker forecast.

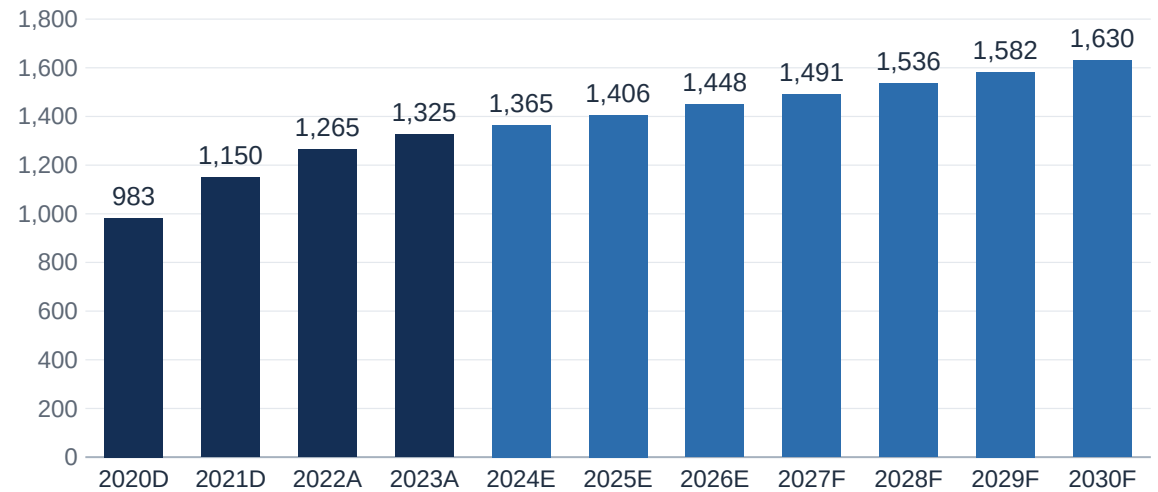

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Sources: CNMC (CNMCS). Input-level URLs, pages, formulas and assumptions in Excel.

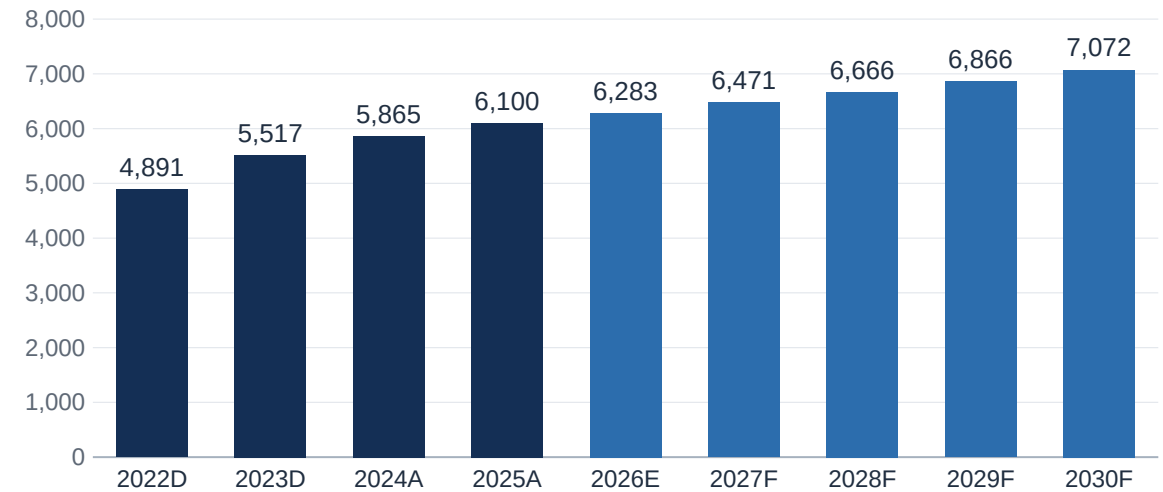

Convenience retail and foodservice offer additional uses of the forecourt

Spanish forecourt-shop sales and the wider QSR market provide separate measures of the opportunity

Spain forecourt-shop sales (€m)

Spain QSR sales, wider market (€m)

Operator	Convenience development	Disclosed scale / target
Repsol	Partners, Klin, Waylet	€188m non-oil margin in 2025. >€220m target for 2028.
Galp	Goody refurbishment and foodservice	445 stores refurbished. 250 Goody rebrands planned in 2025.
Moeve	R'spiro and services	More than 300 R'spiro corners at end-2025.
bp / Dia	Grocery convenience pilot	10-store Spanish pilot announced in 2025.

Forecourt shops

DBK reports €1,265m of sales in 2022 and €1,325m in 2023. 2020–2021 values are back-calculated from published growth. Values from 2024 are analyst estimates at 3% nominal annual growth.

Food-to-go adjacency

The QSR market reached €6,100m in 2025. The chart uses a revised-vintage back-calculation for 2022–2023 and a 3% annual scenario after 2025. QSR is broader than forecourt food-to-go and is not an incremental forecourt TAM.

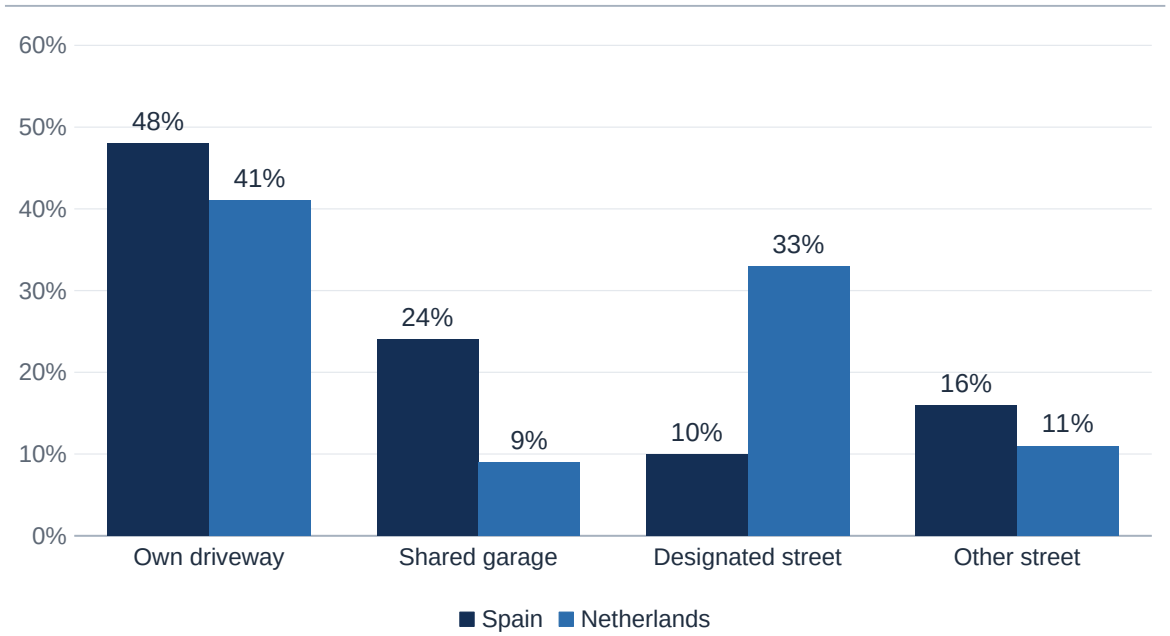

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Sources: DBK / INFORMA (CS), DBK / INFORMA (QSR), DBK / INFORMA (QSR24), Repsol (REP), Galp (GOODY), Moeve (MOE), Dia (DIA). Input-level URLs, pages, formulas and assumptions in Excel.

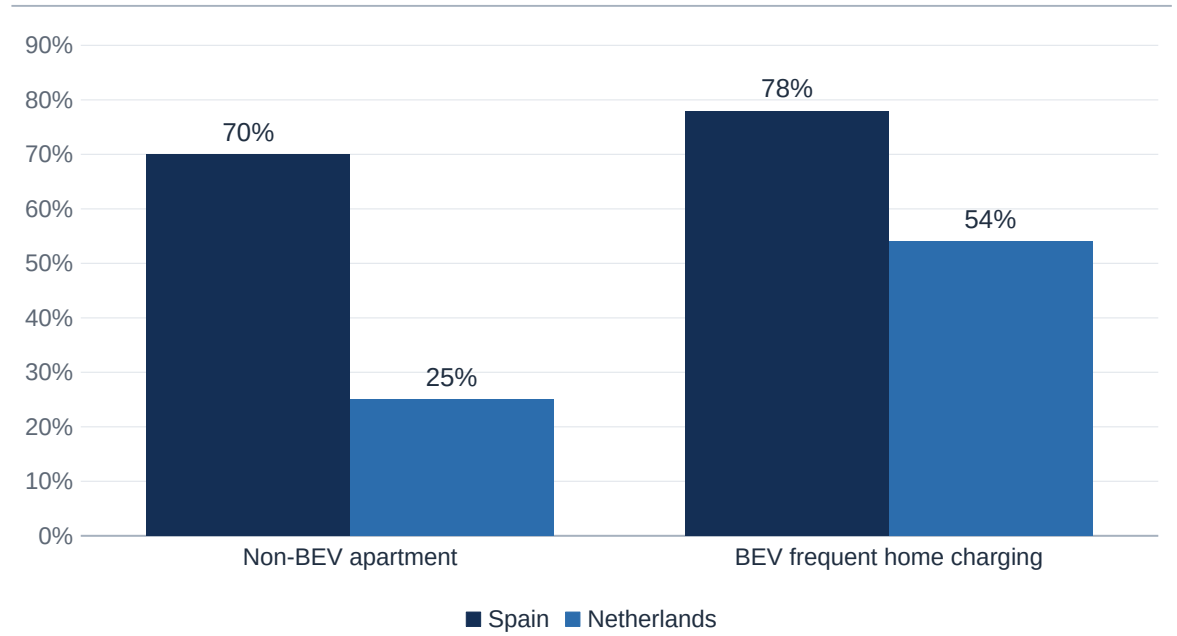

Parking and charging access shape the customer proposition

Survey evidence supports country comparison, but does not establish a measured historical parking trend

Usual parking, 2023 survey (%)

Apartment residents and home charging (%)

Interpret the survey perimeter

Spain’s non-BEV sample is 1,976 respondents versus 1,897 in the Netherlands. Parking responses overlap and chart values are approximate. A driveway share is not an exclusive off-street national parking estimate.

Customer experience

Respondents value operational chargers, clear prices and limited waiting. Spain’s BEV sample contains only 37 respondents, so the results are indicative and should not establish a forecourt demand forecast.

History and forecast boundary

Only the 2023 survey baseline was verified. Excel carries parking categories flat through 2030 as editable assumptions. No missing historical observations have been fabricated.

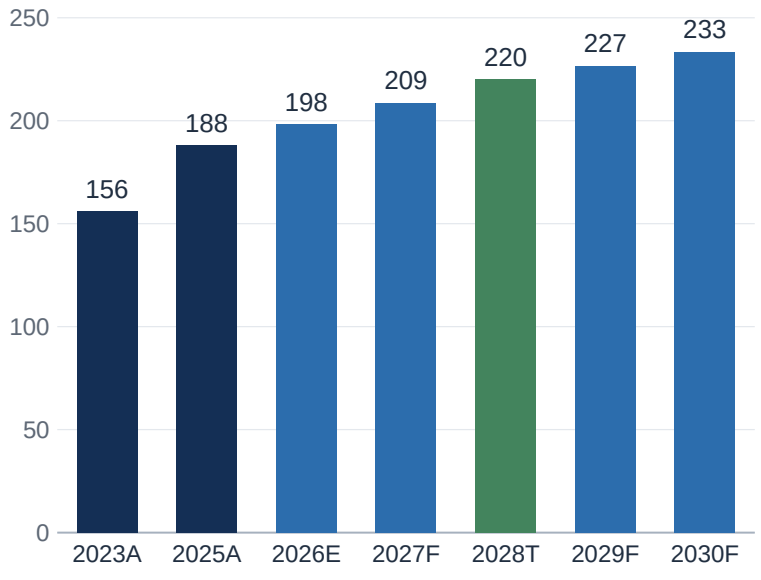

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Sources: European Commission / EAFO (EAFOS), European Commission / EAFO (EAFON). Input-level URLs, pages, formulas and assumptions in Excel.

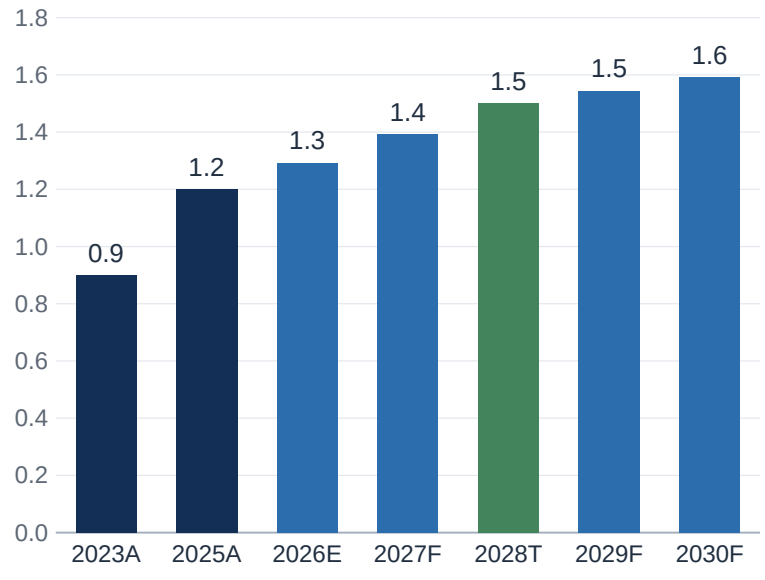

Repsol’s targets combine non-fuel growth with a broader Customer platform

Management targets are distinguished from annual model interpolation and the market-based road-volume scenario

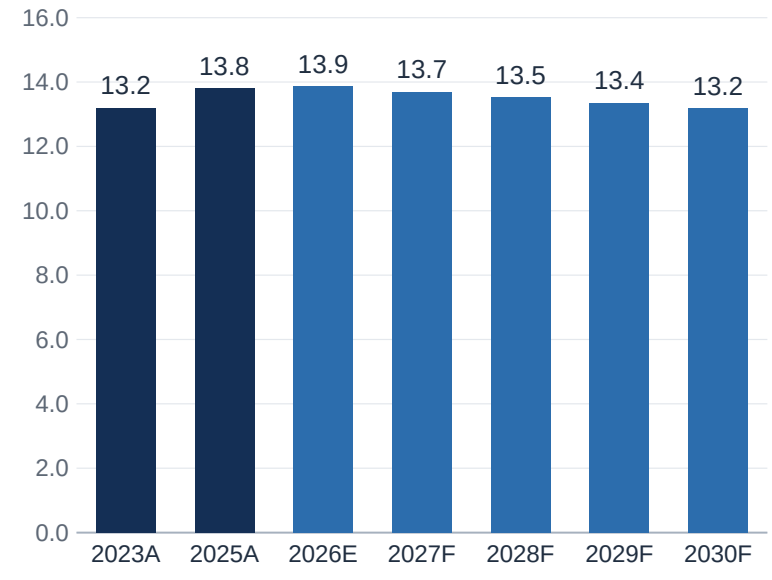

Iberian station non-oil margin (€m)

Customer CFFO, broader segment (€bn)

Iberian road-transport fuel (m m³)

Published operating evidence

Non-oil margin grew from €156m in 2023 to €188m in 2025. Road fuel sales rose from 13.2m to 13.8m m³ and the disclosed road-transport share stayed at 33%.

Targets and interpolation

Management targets >€220m of Iberian station non-oil margin and €1.5bn of Customer CFFO in 2028. Annual 2026–2027 values interpolate to the target floor. 2029–2030 assumes 3% growth.

Perimeter and valuation

Customer includes more than stations, including LPG and other energy activities. Customer CFFO is not pure forecourt EBITDA or a retail SOTP. Road volumes follow the market model at constant share.

Metric / series	Historical period	Annual change	Forecast period	Annual change
REP Nonoil (CAGR)	2023A–2025A	9.8%	2025A–2030F	4.4%
REP CFFO (CAGR)	2023A–2025A	15.5%	2025A–2030F	5.8%
REP RoadVolume (CAGR)	2023A–2025A	2.2%	2025A–2030F	-0.9%

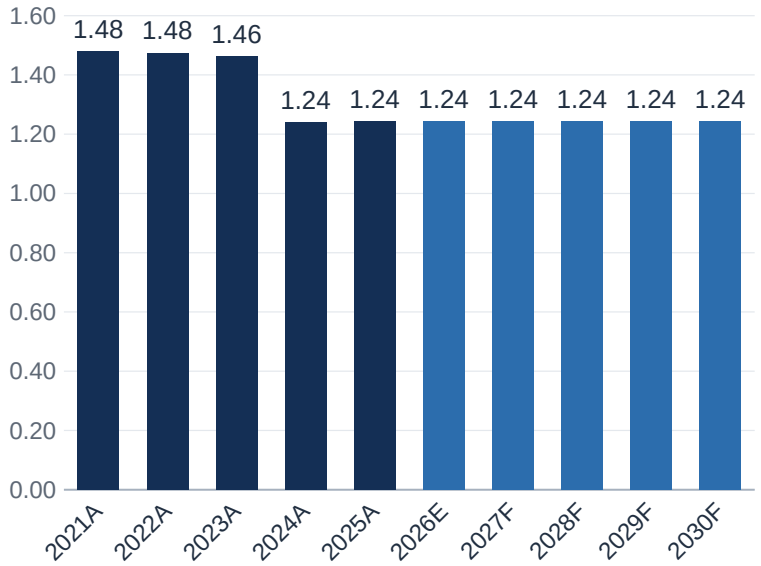

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Sources: Repsol (REP). Input-level URLs, pages, formulas and assumptions in Excel.

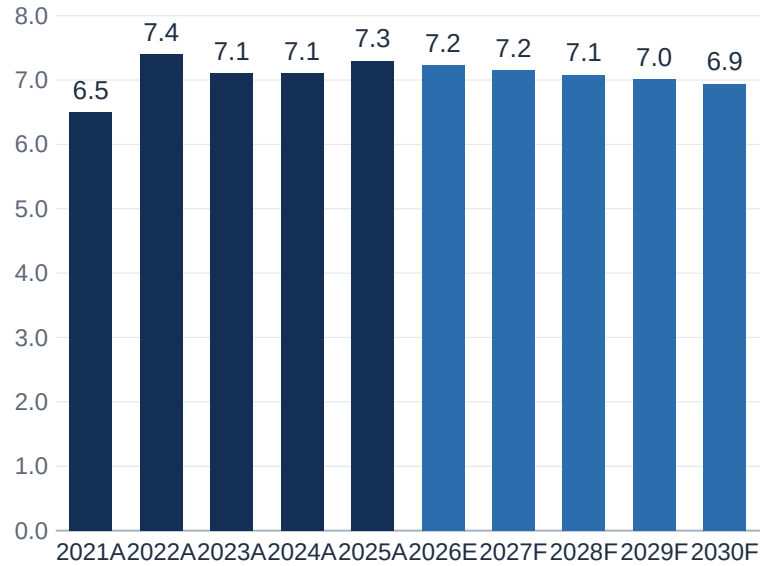

Galp’s Commercial business combines mobility, power, gas and convenience

Historical operating data show a broader business perimeter than a standalone Iberian forecourt estate

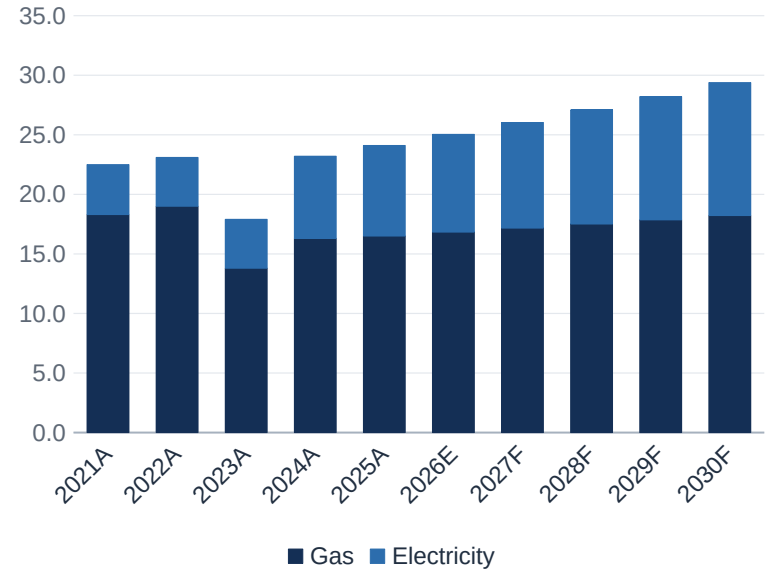

Reported service stations (000s)

Commercial oil client sales (Mt)

Commercial energy client sales (TWh)

Historical station-count break

The reported station count falls from 1,463 in 2023 to 1,240 in 2024. Earlier numbers include Africa and are not a like-for-like Iberian closure series. The 2025 Iberian network has 1,243 sites.

Forecast is analyst-defined

From 2025, stations stay flat, oil client sales decline 1% p.a., gas grows 2% and electricity 8%. These are constant-perimeter assumptions rather than Galp guidance.

Quarterly segment context

Commercial RCA EBITDA was €103m in Q4 2025 and €147m in Q3 2026. Quarterlies are not annualised or treated as pure-retail earnings. Goody and store refurbishment support the convenience offering.

Metric / series	Historical period	Annual change	Forecast period	Annual change
GALP Sites (CAGR)	2021A–2025A	n.a. (method)	2025A–2030F	0.0%
GALP Oil (CAGR)	2021A–2025A	2.9%	2025A–2030F	-1.0%
GALP Gas (CAGR)	2021A–2025A	-2.6%	2025A–2030F	2.0%

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Sources: Galp (GVP), Galp (GALP), Galp (GOODY), Galp (GFY), Galp (GQ3). Input-level URLs, pages, formulas and assumptions in Excel.

Consolidation involves both financial sponsors and strategic buyers

Acquisition status and reclassification matter as much as headline network scale

Date	Transaction / event	Investor relevance and status
Apr 2024	Portobello / Tensile investment in Plenergy	Private capital supports low-cost network expansion.
Jun 2024	Moeve acquires control of Ballenoil	Separate low-cost format within a strategic group. CNMC independent reclassification appears from 2025.
Oct 2024	DISA / Q8 transaction in Portugal	AdC non-opposition decision covers 55 stations.
Jun 2026	Petroprix agrees EROSKI forecourt purchase	40 stations announced. Public release is conditional and is not used as completion evidence.
Oct 2026	Galp / Moeve downstream talks end	No combined RetailCo is included. Earlier proposed network combination has been superseded.

Potential consolidation universe

Spain has 5,505 independent stations at June 2026, including 3,886 without a recurring brand. Fragmentation is a starting universe, not a count of available acquisition targets.

Forward investment themes

Corporate carve-outs, founder succession and regional roll-ups can support deal flow. No transaction count, deal valuation or probability forecast is inserted without evidence.

Value creation and diligence

Local catchment density, procurement, non-fuel conversion and property tenure determine synergies. Rebranding and contract renewals can alter both affiliation and economic ownership.

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Sources: Portobello Capital (PORTO), Moeve (MOE), Autoridade da Concorrência (ADC), EROSKI (EROSKI), Galp (END), CNMC (CNMC26). Input-level URLs, pages, formulas and assumptions in Excel.

Policy affects pump prices, fuel procurement and the transition pace

Separate fiscal pass-through, compliance obligations and long-term policy targets in underwriting

Estimated fuel regulatory costs (c€/litre)

Spain model passenger BEV stock (m)

Country	Policy exposure	Underwriting treatment
Spain	Fuel taxes and temporary measures	Model pump-price tax pass-through separately. Do not assume temporary rates persist.
Spain	Biofuels and other obligations	Test certification, procurement, sustainability and recovery through price.
Portugal	ERSE efficient-price supervision	Use consistent reference prices and retail-cost definitions.
Iberia	Charging grid access and permits	Assess capex, connection timing, property rights and utilisation.

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Compliance costs

CNMC identifies increased biofuel and other obligations as important contributors to the gross-spread increase. The forecast assumes 2% annual nominal growth and requires supplier pass-through diligence.

Competition and contracts

Spain’s hydrocarbon framework constrains exclusivity and network expansion in certain circumstances. DODO renewal, pricing freedom and supply-contract terms require site-level review.

Fiscal and EV policy

Temporary tax relief should be separated from retained margin. Spain’s PNIEC 2030 electric-vehicle target uses an all-vehicle perimeter and must not be substituted for the passenger BEV model.

Sources: CNMC (CNMCS), ERSE (ERSE), MITECO (PNIEC), BOE (BOE). Input-level URLs, pages, formulas and assumptions in Excel.

Retail SOTP requires an explicit carve-out perimeter

Public segment disclosures do not establish a verified broker valuation of pure Iberian fuel retail

Valuation item	Repsol	Galp
Public segment	Customer	Commercial
Available economic evidence	Customer CFFO €1.2bn in 2025. €1.5bn central target for 2028.	Commercial quarterly RCA EBITDA €103m Q4 2025 and €147m Q3 2026.
Scope beyond stations	LPG, energy retail and other customer businesses.	Enterprise clients, power, gas and international activities.
Pure Iberian station EBITDA	Not separately verified in accessed public sources.	Not separately verified in accessed public sources.
Broker pure-retail SOTP	No authenticated public retail value verified.	No authenticated public retail value verified.
Required valuation bridge	Carve-out EBITDA, leases, central costs, property and capex.	Carve-out EBITDA, leases, central costs, property and capex.

Workbook valuation input bridge

Blank inputs are provided for authenticated pure-retail EBITDA and EV / EBITDA. The resulting EV remains unavailable until both are entered. No group target price or mixed-segment earnings substitutes for retail SOTP.

Broker screenshot evidence

The supplied images inform layout and topic selection. Unreadable or masked broker figures are not transcribed as evidence. Private OC&C CDDs and Prax IMs were not provided as source documents.

Forecast assumptions and investment sensitivities

One editable annual forecast connects the charts, with a clear distinction between source data, estimates, targets and forecasts

Driver	Spain	Portugal / other
Passenger-car parc growth	+1.0% p.a. from 2025	+1.5% p.a. from 2025
Mileage change	−0.3% p.a. from 2025	Same assumption for fuel-demand model
BEV share of passenger-car stock in 2030	8%	14%
Passenger / commercial forecourt fuel share	65% / 35%	70% / 30%
Liquid-fuel efficiency / commercial demand	−1.0% / −0.5% p.a. from 2027	Same annual assumptions
2026 forecourt volume growth	+0.5% estimate	+0.5% estimate
Total site growth from 2027	+0.25% p.a.	+0.5% p.a.
Gross spreads / compliance costs	+2.0% nominal p.a.	No comparable Portuguese annual spread forecast
Forecourt shops / wider QSR sales	+3.0% nominal p.a.	Spain only
Independent chains from H1 2026	Plenergy +50 sites p.a.	Petroprix +20 sites p.a.

Forecast labels

A published actual. D derived history. H June 2026. E analyst estimate. T management target. F analyst forecast.

Model limitation

The demand model uses stock-share trajectories and aggregate fuel segments, rather than a vehicle-vintage scrappage model. Geography, tourism, freight, fuel tourism and pricing shocks can change actual outcomes.

A actual D derived history H June 2026 E estimate T management target F analyst forecast

Sources: Analyst assumptions (ASSUME). Input-level URLs, pages, formulas and assumptions in Excel.

Evidence coverage and remaining diligence

Historical depth and forward assumptions are shown explicitly, with gaps retained where the evidence does not support a numerical series

Email requirement	Historical / current coverage	Forecast / remaining evidence
Players, shares, site counts	Spain annual 2019–2025 plus June 2026. Portugal 2010–2026 selected years.	Annual station / share model to 2030. No transaction-specific forecasts.
Ownership and offering	Listed, strategic, sponsor and founder categories. Current operating models.	Qualitative investment outlook. No forecast ownership changes.
Car parc and powertrain	Cars 2020–2024. Powertrain 2020 / 2022 / 2024.	Annual parc and powertrain scenario to 2030.
Mileage and total distance	DGT 2022–2024 circulating fleet. 2024 methodology change.	Annual estimates / forecasts to 2030. Portugal mileage assumption is a proxy.
Site size and parking	Throughput benchmarks. Parking survey 2023 only.	No verified physical-area series. Parking flat carry-forward only in Excel.
Volumes and margins	Forecourt volumes 2019 / 2021–2025. Spanish spreads 2021–2025.	Annual demand and spread forecast to 2030. Portugal margin intervals only.
Convenience / customer evidence	Shop sales 2020–2023 derived / actual. QSR 2022–2025. EAFO survey.	Annual shop / QSR scenario to 2030. No proprietary forecourt-mission survey.
Taxes, intervention and M&A	Regulator reports, policy targets and announced transaction status.	Qualitative outlook. No unsupported tax or deal forecast.
Broker SOTP	Public segment evidence for Repsol and Galp.	Pure-retail broker figures unavailable. Editable valuation bridge provided.

Source access

Public regulator, company and sector releases underpin the analysis. Paid DBK reports, private broker research and the named CDD / IM files were not accessed.

Workbook audit trail

Every chart point maps to a slide cell and canonical model / source cell, with URLs, page locators, formulas, assumptions and reconciliations.
